

Farha Ashraf El-Domyatti

Software Engineer

Cairo, Egypt | +201103906342 | aldmyatyfrhh@gmail.com [LinkedIn](#)

Summary

Junior Back-End Developer specialized in **Node.js**, **Express.js**, and **TypeScript**. Experienced in building **RESTful APIs**, authentication systems, and real-time applications using **Socket.IO** and **WebRTC**. Skilled in applying **OOP principles** and **Modules Pattern** to write modular, maintainable code. Proficient with **MongoDB**, **MySQL**, and the **MVC design pattern**. Passionate about writing clean, scalable code and eager to contribute to real-world projects.

Education:

Bachelor's degree in Computer Science

Major: Computer Science
University: Matrouh University

Class: 2022-2026
Degree: Excellent

Experience:

Personal Projects & Freelance Work

E-LEARN Platform– Node.js | TypeScript | MongoDB | Socket.io | JWT | REST API

Developed a full-stack backend system for an interactive educational platform to manage courses, instructors, and students. Key features included secure user authentication, role-based access (student/instructor), course management, real-time chat between students and instructors using **Socket.io**, file uploads for course thumbnails and instructor profiles with **Multer**, and email notifications for verification and password recovery using **Nodemailer**. The project was built with **Node.js**, **TypeScript**, and **MongoDB**, providing RESTful API endpoints and dynamic EJS views for seamless frontend integration.

Real-Time Chat Application (Socket.IO + MySQL)

Developed a chat app supporting multiple rooms and persistent message storage in MySQL. Integrated real-time communication with Socket.IO. Organized project structure using MVC pattern. Tools: Node.js, Express.js, MySQL, Socket.IO.

Point of Sale (POS) Desktop App — Electron

Developed a desktop Point of Sale (POS) application using Electron framework and Node.js. Implemented core features such as product management, sales transactions, and invoice saving. Integrated with a backend (Node.js + MongoDB/MySQL) to handle data storage and retrieval. Tools: Electron, Node.js, Express.js, MongoDB/MySQL.

Technical Skills:

- **Programming & Frameworks:** Node.js, Express.js, TypeScript, Electron.
- **Architecture & Patterns:** OOP JavaScript, Modules Pattern, MVC Design Pattern.
- **Database:** SQL Server, MySQL, MongoDB.
- **Real-Time & Communication :** Socket.IO, WebRTC
- **Authentication & Security:** JWT, OAuth (Google, GitHub, Facebook), Password Hashing (bcrypt)

- **Templating & Rendering:** EJS
- **API Development & Testing:** RESTful APIs, Postman (Endpoints Collection)
